- The color chart includes **APPROXIMATE PMS** numbers for a typical (thick) layer of CTI ink.
- Actual colors will vary depending on **art work, printing process, pressmen, and the substrate** being printed on. You **MUST** do a trial for your individual project to get an accurate idea of what kind of color intensity you will achieve.
- The small amount of color observed in the “colorless” or “clear” state of the screen inks is visible at thicker ink films, as with screen printing. The colorless or clear state of thinner ink films, like offset and flexo prints, have only a very faint amber color, if any at all.
