

Chromatic Technologies has invented the world's first Solvent ThermoChromic Ink for large format commercial Flexo and Gravure printing presses.

Wet samples and trial quantities of Solvent Blue Full Color 8°C ink are now available for pioneer customers.

WARM

COLD

COMMERCIAL PRINTERS AND CONVERTERS WILL ENJOY

- strong color with a single hit
(water-based inks often require multiple hits to achieve target color)
- longer shelf-life than water-based thermoChromic inks
- excellent print laydown and quality
- superior mileage
- viscosity management using standard solvents
- a finished, press-ready ink for low waste and easy implementation

Perfect for major Consumer Packaged Goods brands looking for unique ways to engage consumers.
